Descriptions of Varieties-

Excelsior, Per.—The very earliest berry grown and one which is a fine berry for home use. They make a nice, dark red berry which makes the finest of jelly and preserves of any berry grown. We advise all to plant at least some of this grand old variety.

Thompson, Per.—The old Lady Thompson, improved over the old variety. This variety is firmer; is a good fruiter and will carry well any place. A good plant maker, will stand hot dry summers well. Season is about a week later than Excelsior and the Excelsior comes on right after the last frost. They can't be earlier than the Excelsior. This Thompson variety does well all over the southwest.

Missionary, Per.—This berry is the leading sort for the south. They grow them with success in Florida, Alabama, and South Texas, and we fill all orders to million lots and advise the planting of them in the above states. Season second early; a good selling berry.

Imp. Klondike, Per.—A good all around berry. The one we sell more plants of than any other variety of its season. We can furnish them in any amounts wanted. We guarantee satisfaction on all your orders for this grand berry. I introduced this berry and know it to be a good berry. Try them.

Dunlap, Per.—This variety does well in the northern and western states. We don't like them for the south as they are not as good as others of the same season in this section. We have the pure stock of them; we can fill all orders.

Aroma, Per.—This berry, for its season, sells more than any of the later varieties. We sell more of them each year than all other kinds combined, for late fruiting. We have plenty of the best plants and can fill all orders; large or small. Hope to have your Aroma orders.

Champion K., Per.—A new early berry; large size; very productive and a good shipper; they will pay to plant.

St. Louis, Per.—The best early berry grown today for home and nearby markets; we know of no better berry to grow than the St. Louis; yield is greater than any variety we have ever grown for any season of the year. You can make 400 crates per acre from the St. Louis. Don't fail to plant them. Originated and introduced by me.

Premier, Per.—A berry grown with success in the east and north; not so good for the south.

Dorsett, Per.—This new variety originated by U. S. Department of Agriculture. It is a scientific cross between the Premier and the Royal Sovereign, an English variety. Dorsett is one of the firmest berries known, and one of the heaviest producers, having produced at the rate of 6,640 quarts per acre in the east. Color of fruit is light red and will hold this color long after picking. Dorsett berries average very large in size, even a little larger than the Premier. A fine variety for all sections.

Bellmar, Per.—This is a U. S. Department of Agriculture origination that will sure please you. This berry will fruit more than the old Klondike which is a favorite in your state. The berries are a glossy bright red, cupped like the Premier, giving an effective appearance. These berries are extra large in size making the most attractive appearance available. We sincerely recommend this variety to you. Try a few thousand plants and see for yourself.

Fairfax, Per.—Another U. S. Department of Agriculture origination. A very productive berry averaging very large in size and fully as firm as the Blakemore. This makes it a fine shipping berry. The color is light red with very green hull. By all means try some of this new variety.

J. A. BAUER PLANT COMPANY'S BLUE RIBBON BRAND PLANTS

We Have Millions of Imp. Klondike. This shows one block of them.

Blakemore, Per.—A wonderful U. S. Department of Agriculture creation from a cross of the Missionary and Premier. The berries are much firmer than the Missionary, Premier, or the Klondike. The berries are a beautiful bright glossy red color, with a tough skin, firm flesh, with wonderful mild flavor. Plants make runners freely and you are sure of getting a good fruiting row. It is a wonderful market berry. One week earlier than the Premier.

Mastodon, Per.—The greatest everbearing berry grown and one that will please you. Large to very large in size; a sure cropper all summer.

For over ten years we have had a big strong demand for Mastodon Everbearing. Every season we have run short and had to ship in stock from the north. In the spring of 1930 we bought over \$4,000.00 worth of them, so we set out 15 acres of our own. We have had a time keeping off the berries and blooms. We hoed them nine times and picked berries and blooms

off three times besides. This makes 12 times we have gone over them to keep off the fruit so we could make plants. Yet on September 5th, they were full of berries and blooms. We expected to keep them off until September 25, then let them fruit and sell the berries. We have had berries for several years up to November 20th. They stand down to 20 degrees above zero and still fruit each fall. It takes real cold weather to stop this Mastodon from fruiting. We can fill your orders this time with true blue plants as in the past. I can say by test no other everbearing sort is as good as Mastodon. We have tried all of them and if you want the best, plant Mastodon. Notice the view of our Mastodon taken September 1st. They will grow another thirty days. We have plenty of plants for you.

Progressive, Per.—This is the second everbearing variety. It is next to Mastodon in the field of everbearing varieties. We have a fair stock of them and hope to have your orders.

The New Boysenberry

This berry is going to upset the berry market just like the Youngberry did, and those who start with it early are the ones that will make the money.

This wonderful new fruit was propagated by crossing Loganberries, raspberries, and blackberries. The Boysenberry makes a vine growth similar to the Youngberry, except that the cane growth is a little more vigorous and the leaves are darker green and the fruit spurs, that grow from each leaf joint in the spring, average about two inches longer. The long spurs project the berries well away from the vines making

picking much easier. There are one or two more berries to the spur than Youngberries and the fruit is much larger and ripens slower. In color the fruit is identical with Youngberry, but is more highly flavored and less seedy. It is absolutely the largest vine or bush berry grown. It is a better shipper and canner than the Youngberry. The Boysenberry is exceeding prolific.

Be one of the first to grow this new fruit in your locality. Boysenberries have returned as much as \$1,760.00 per acre in California.

The Youngberry

This is a grand fruit and we think it will pay you to try them.

They have made yields of 20,000 pints to the acre in California and have also made good yields in Alabama and Georgia.

The berries run about an inch long; are purple in color; have a fine flavor and are very productive. The flavor is somewhat like a raspberry instead of a dewberry. The vines are vigorous and sometimes grow twenty feet in one season. Although the

vines are thorny, the fruit stems hang out from the vines making them easy to pick.

What ever You Do plant some Youngberries, they have the flavor of the Red Raspberry and are a cross between the Austin Dewberry and the Loganberry. They make the best jelly, marmalade and jam ever. In Southern Alabama they have cleared from \$550.00 to \$650.00 per acre from Youngberries and in California as much as \$1,000.00 per acre.

CULTURAL INSTRUCTIONS OF THE BOYSENBERRY AND THE YOUNGBERRY

We set 1,000 plants to the acre; making the rows about 9 feet apart and setting them about five to six feet in the row. Should be set as early in the spring as possible although some set in the fall. As vines start to run keep them trained along the rows so they will not be in the way of the plow. In winter place posts along the rows every ten feet and string two

wires on to them, the first wire being about eighteen inches from the ground. In the early spring tie your vines up to the wires, stretching the vines out full length. One set of posts and wires will last the lifetime of the plants or ten or fifteen years. After fruiting, cut out all old wood and train and cultivate the vines as you did at first. Plow and hoe when needed.

NOTICE:—Pamphlet containing information on Cultivation of Strawberries sent free on request.

VERY IMPORTANT—No difference how many times you have written us, always give your full address, and write your Name, Post Office, County and State very plainly.

Do you wish us to substitute to the best of our judgement in case any variety ordered should be exhausted? Write Yes or No.

Please write in the quantity, full name of variety and price. Any necessary correspondence should be written on a separate sheet.

[illegible]

WARRANTEE—We exercise the utmost care in having all our stock true to name, and believe we come as near doing so as any plant grower in the United States; but in case any stock proves other than true to name we are only liable for the part that may not be true to name, at the price paid for stock and the purchaser of this order accepts this agreement in placing this order.
